ZAYRA SOLUTIONS

Zayra Drive
Education & EdTech · The highway code, learned, practised and passed.

Zayra School
Education & EdTech · Your school, run simply and securely.

Zayra Agro
Agriculture & AgriTech · From seed to market, an adviser in your pocket.

Zayra Nkap
Fintech & Management · Your meeting's ledgers, paper-free.

CLIENT PROJECTS

Afrikamode
Fashion & e-commerce · The online store of an African fashion brand, in two countries.

Elec One
Energy & IoT · Control and reduce your electricity use from your phone.

Gathe Finance
Fintech & Management · Cash flow under control for SMEs and freelancers.

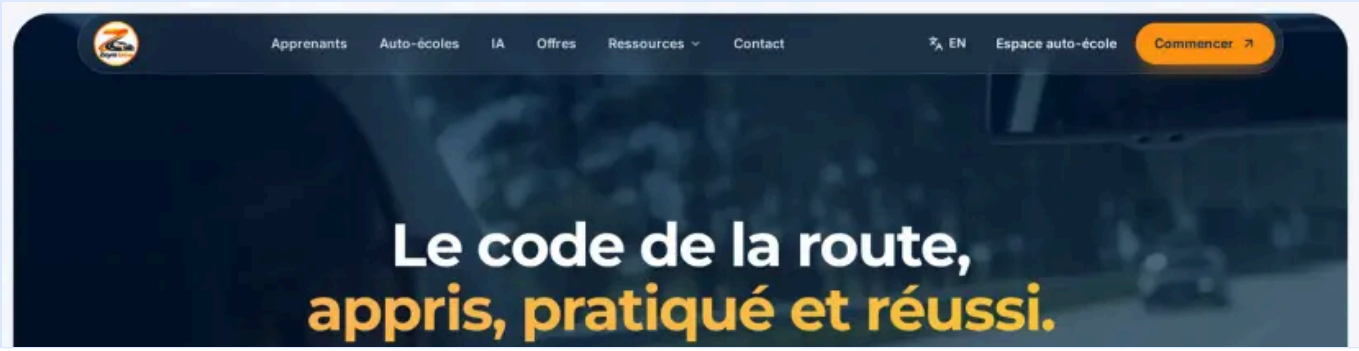

e-Learning platform
Education & EdTech · Making IT careers accessible everywhere in Africa.

ZAYRA SOLUTIONS · EDUCATION & EDTECH

Zayra Drive

The highway code, learned, practised and passed.

Client : Zayra solution · learners and driving schools

Zayra Drive prepares candidates for the theory part of the Cameroonian driving test: illustrated lessons, picture quizzes, timed mock exams and explained corrections, in French and English. Partner driving schools follow each learner's preparation.

THE NEED

Candidates revised from scattered material with no view of their real level, and driving schools had no way to follow their learners between lessons.

OUR ANSWER

A web platform and an Android app covering the whole journey, from lesson sheet to mock exam, with an AI tutor answering from the Zayra Drive sheets, a readiness score per topic and a dedicated driving-school space.

KEY FEATURES

Real mock exams. 40 timed questions, part A text-only and part B on photos, just like the real day.

Readiness score. Topic by topic, it tells the candidate when to sit the exam.

Sourced corrections. Every answer is explained and backed by the relevant article of the code.

AI tutor per module. It answers questions using the lesson sheets.

Offline revision. Downloadable modules, sessions synced when the network returns.

Zayra Drive Schools. Driving-school dashboard: learner follow-up, DRV-code invitations, official results.

SERVICES DELIVERED

- Product design and user journeys
- Website and management spaces (Next.js)
- API and database (FastAPI, PostgreSQL)
- Mobile Money payments
- Hosting, updates and operation
- Android app (Flutter) with offline revision
- AI tutor per module

RESULTS

- **Live: web and Android app**
- **686 corrected questions, 288 picture quizzes, 17 syllabus modules**
- **Essential plan: 10,000 FCFA for 90 days, paid via Mobile Money**
- **60% of each Essential subscription shared with the partner driving school**

Technologies : Next.js · TypeScript · Tailwind CSS · FastAPI · PostgreSQL · Flutter · Claude (IA) · ReportLab (PDF) · Redis · MinIO · Docker

ZAYRA SOLUTIONS · EDUCATION & EDTECH

Zayra School

Your school, run simply and securely.

Client : Zayra solution · schools

Zayra School runs a school from enrolment to report card: teachers enter grades, management validates, families pay by Mobile Money and every issued document can be verified online. From nursery to university, in French and English.

THE NEED

Many schools still run on paper or Excel: hard-to-reconcile cash desks, forgeable report cards, families told late about absences and payments.

OUR ANSWER

A single tool tuned for each type of school (primary, French- and English-speaking secondary, LMD, training), with a grade-approval flow, QR-verifiable documents and automatically reconciled Mobile Money payments.

KEY FEATURES

Enrolment and fees. Student records, re-enrolment and instalment payments, official receipts.

Grades and report cards. Entered by teachers, approved by management, dated and verifiable.

Built-in Mobile Money. MTN MoMo and Orange Money, automatic confirmation, never a double payment.

Class life. QR-code attendance, timetable shared on WhatsApp, alerts to families.

Management dashboard. Headcount, cash desk, arrears and results in one place, by role.

Security. Each school isolated in the database, custom roles and a log of every action.

SERVICES DELIVERED

- Product design and user journeys
- Website and management spaces (Next.js)
- API and database (FastAPI, PostgreSQL)
- Mobile Money payments
- Hosting, updates and operation
- QR-verifiable report cards and certificates
- A website for each school

RESULTS

- **Live, accessible from any browser**
- **11 modules, 3 report-card templates (primary, secondary, training)**
- **100% of actions logged**
- **Set-up from 200,000 FCFA, including the school's website**

Technologies : Next.js · TypeScript · Tailwind CSS · FastAPI · PostgreSQL · Flutter · ReportLab (PDF) · MinIO · Docker

ZAYRA SOLUTIONS · AGRICULTURE & AGRITECH

Zayra Agro

From seed to market, an adviser in your pocket.

Client : Zayra solution · farmers and cooperatives

Zayra Agro supports farmers from seed to market: they learn, produce better, protect their harvest and find the right people to buy from and sell to. Input dealers, experts, storage operators and buyers work on the same information.

THE NEED

Farm advice often comes too late for lack of field agents; inputs are costly and sometimes dubious; without storage or a reliable buyer, harvests are sold off cheaply.

OUR ANSWER

An AI adviser built on an indexed agronomy base that cites its sources, training reviewed by agronomists, a catalogue of approved inputs, and links to verified experts when AI is not enough.

KEY FEATURES

AI farm adviser. "My leaves are turning yellow" is enough: it understands the crop, the problem, and cites the reference.

Validated training. Short lessons and quizzes reviewed by agronomists, readable offline.

Approved inputs. Only validated products available close to home are suggested.

Experts and missions. Agronomists, vets, soil scientists: each mission goes to the nearest verified expert.

Selling with confidence. Dated, sourced reference prices; buyers and storage operators to contact directly.

No financial middleman. Farmers pay the seller or expert directly.

SERVICES DELIVERED

- Product design and user journeys
- Website and management spaces (Next.js)
- API and database (FastAPI, PostgreSQL)
- Mobile Money payments
- Hosting, updates and operation
- AI adviser with semantic search (pgvector)
- Light Android app, offline lessons

RESULTS

- **Live: web and Android app**
- **Over 1,500 indexed agronomy sheets**
- **10 regions of Cameroon covered**
- **Free for farmers during launch**

Technologies : Next.js · TypeScript · Tailwind CSS · FastAPI · PostgreSQL · pgvector · Flutter · Claude (IA) · Redis · MinIO · Docker

ZAYRA SOLUTIONS · FINTECH & MANAGEMENT

Zayra Nkap

Your meeting's ledgers, paper-free.

Client : Zayra solution · tontines and associations

Zayra Nkap keeps a meeting's accounts in real time: contributions, tontines, savings, penalties and proof of payment, even offline on the treasurer's phone. Designed for Bamileke meetings and every tontine in Cameroon.

THE NEED

Meetings keep their accounts in paper ledgers: manual sums, forgotten penalties, disputes over balances and withdrawals, little transparency for members.

OUR ANSWER

An app that follows what the bylaws already provide (shares and half-shares, auctions, guarantors, relief, year-end split), with offline live entry, two-person approval of withdrawals and PDF financial statements.

KEY FEATURES

Live session entry. The treasurer records each payment name by name, even with no network in the room.

Multiple tontines. Several tontines, shares and half-shares, capped auctions and logged random draws.

Loans and relief. Guarantors, schedules and the meeting's relief scale.

Two-person approval. Every withdrawal is approved by two board members.

PDF statements. Minutes, member positions and year-end split, ready to share on WhatsApp.

Money stays with the meeting. Contributions never pass through the tool.

SERVICES DELIVERED

- Product design and user journeys
- Website and management spaces (Next.js)
- API and database (FastAPI, PostgreSQL)
- Mobile Money payments
- Hosting, updates and operation
- Offline Android app (Flutter, Drift)
- PDF financial statements and year-end split

RESULTS

- **Live: web and Android app**
- **Up to 100 members per meeting**
- **30-day free trial, then 5,000 XAF a month or 50,000 XAF a year**
- **Each meeting has its own address and isolated data**

Technologies : Next.js · TypeScript · Tailwind CSS · FastAPI · PostgreSQL · Flutter · Drift (hors ligne) · ReportLab (PDF) · Redis · MinIO · Docker

CLIENT PROJECTS · FASHION & E-COMMERCE

Afrikamode

The online store of an African fashion brand, in two countries.

Client : Afrikamode · Italy and Cameroon

Afrikamode is an African fashion brand present in Italy and Cameroon: an in-house line and guest designers, a contemporary aesthetic. We designed and built its multilingual online store and the back-office that runs it.

THE NEED

Selling in two countries and several languages with a demanding brand image, while keeping day-to-day control of catalogue, stock, shipping and marketing without depending on a provider.

OUR ANSWER

A fast, editorial store for customers, and a full back-office for the brand: products and variants, brands, categories, stock, shipping rates, marketing and multilingual content, all self-managed.

KEY FEATURES

Multilingual store. Catalogue, product pages, cart and secure checkout, in several languages.

Filterable catalogue. Filters by size, brand, category and price.

Editorial journal. Fashion and lifestyle content to carry the brand image.

Products and variants. Variant options (sizes, colours), brands and categories.

Stock and shipping. Stock tracking and shipping rates managed from the back-office.

Marketing and CMS. Marketing overview and multilingual content run by the brand.

SERVICES DELIVERED

- Store UX/UI design
- Web development (Next.js) and API
- Custom administration back-office
- Multilingual catalogue and content
- Secure payment
- Go-live

RESULTS

- **Live in Italy and Cameroon**
- **A complete store and back-office, self-managed by the brand**

Technologies : Next.js · Tailwind CSS · FastAPI · Django · PostgreSQL · Docker · nginx

Links : https://afrikamode.store · https://zayra-technologies.com/en/portfolio/afrikamode

CLIENT PROJECTS · ENERGY & IOT

Elec One

Control and reduce your electricity use from your phone.

Client : 2MeTech Sarl · Energy

Elec One is the mobile app that drives EnMKit, the smart energy-control device designed by 2MeTech. From their phone, users remotely switch off equipment left running.

THE NEED

An iron, an air-conditioner, a TV left on: wasted electricity weighs on the bill, and the EnMKit box needed a simple interface to be used every day.

OUR ANSWER

A clear mobile app that connects users to their EnMKit box and lets them follow and switch off their equipment remotely, in real time.

KEY FEATURES

Remote control. Switch off equipment left running, from your phone.

Real time. Equipment status followed live.

Lower bills. Cut waste to durably reduce consumption.

Built for daily use. A simple interface every member of the household can use.

SERVICES DELIVERED

- Mobile UX/UI design
- App development (Flutter)
- Integration with the EnMKit box
- Go-live

RESULTS

- **In production**
- **Electricity consumption controlled and reduced remotely**

Technologies : Dart · Flutter · Firebase

CLIENT PROJECTS · FINTECH & MANAGEMENT

Gathe Finance

Cash flow under control for SMEs and freelancers.

Client : African SMEs and freelancers

Gathe Finance is a financial management platform for African freelancers and SMEs: tracking of every account, categorised transactions, budgets and dashboards.

THE NEED

A small African business's money moves between cash, Mobile Money and bank: without a suitable tool, cash flow and profitability stay unclear.

OUR ANSWER

A platform that brings every account together, auto-categorises transactions and presents cash flow and P&L in readable dashboards.

KEY FEATURES

Multi-account. Cash, Mobile Money and bank tracked in one place.

Auto-categorisation. Transactions classified without tedious data entry.

Budgets and goals. Set limits and track financial goals.

Reporting. Cash-flow and P&L dashboards.

SERVICES DELIVERED

- UX/UI design
- Web development and API
- Dashboards and reporting
- Go-live

RESULTS

- **A clear view of cash flow across every account**

Technologies : Next.js · Tailwind CSS · FastAPI · Django · PostgreSQL · Docker · nginx

Links : https://zayra-technologies.com/en/portfolio/gathe-finance

CLIENT PROJECTS · EDUCATION & EDTECH

e-Learning platform

Making IT careers accessible everywhere in Africa.

Client : IT learners and professionals

Edlearning is a training platform for IT careers: web development, Python, cybersecurity and more, with structured tracks and learner follow-up.

THE NEED

Training seriously in IT is hard without a clear path or suitable resources, especially far from the big training centres.

OUR ANSWER

Progressive tracks, organised resources and learner follow-up, in a mobile app accessible anywhere.

KEY FEATURES

IT catalogue. Web development, Python, cybersecurity and more.

Structured tracks. Clear steps from beginner to advanced skills.

Progressive resources. Organised content to learn at your own pace.

Learner follow-up. Each learner's progress, visible at any time.

SERVICES DELIVERED

- UX/UI design
- App development (Flutter)
- Learning tracks and learner follow-up
- Go-live

RESULTS

- **A complete catalogue of tech training**

Technologies : Dart · Flutter · Firebase
